MASTER CV – comprehensive reference document.

Professional Summary

Full-stack software engineer with 5+ years of experience spanning frontend, backend, mobile, and AI-powered feature development. Core strength in React/Next.js/TypeScript, with deep working proficiency across Node.js, Python (Django, FastAPI), Java (Spring Boot), and .NET/C#/ASP.NET Core. Experienced building microservices and event-driven systems, native and hybrid mobile apps, financial calculation tools (P&L, break-even analysis), GIS-adjacent mapping (academic background), and AI/LLM-powered features (RAG, semantic search). Comfortable with automation/no-code platforms, admin tooling, and workflow integrations (Stripe, Twilio, Google APIs). Currently leading a team of 4 engineers as Team Lead at Wazobia Technologies.

Technical Skills

Languages: JavaScript, TypeScript, Python, PHP, Java, C#, SQL
Frontend: React, Next.js, Vue, jQuery, Redux, Zustand, TanStack Query/Table/Router/Start, Tailwind CSS, shadcn/ui, Radix UI, React Hook Form, Zod, Framer Motion, Vite, HTML5, CSS3, SSR, Immutable.js, Webpack, Babel
Admin & Internal Tooling: React Admin, Directus
Mobile: React Native, Expo, Capacitor, EAS, Native Android (Java, Kotlin, Android SDK), Push Notifications, Deep Linking
Backend: Node.js, Express, NestJS, Hono.js, Django, Django REST Framework, Celery, FastAPI, Laravel, Spring Boot, ASP.NET Core, .NET, Microservices, Event-Driven Architecture, Distributed Systems
API & Data: REST, GraphQL (Apollo/NestJS), tRPC, TypeORM, Prisma, Drizzle ORM, JSON/GeoJSON
Databases: PostgreSQL, MySQL, MariaDB, MongoDB, Redis, Memcached, DynamoDB, Qdrant
AI & LLM: OpenAI API, LlamaIndex, RAG (Retrieval-Augmented Generation), Semantic/Vector Search, Embedding Pipelines, AI-Assisted Development (Claude, Cursor)
Payments & Integrations: Stripe, Twilio, Google APIs (Calendar, Meet, Places), Supabase, Sentry, LogRocket, Pusher/WebSockets, Novu, React Email, AWS SES
Automation & No-Code: Make.com, n8n, Zapier, GoHighLevel (GHL)
GIS & Mapping (Academic Background): ArcGIS API, Leaflet, Mapbox GL JS, GeoJSON, Spatial Data Analysis
Financial & Data-Heavy UI: P&L Statement Generation, Break-Even Analysis, Calculation Engines, Spreadsheet-Style Inputs, PDF/Excel Export
Security: OAuth, JWT, Session Management, Role-Based Access Control (RBAC)
Testing: Jest, Vitest, React Testing Library, Playwright, Cypress, Storybook, TDD, Unit/Integration/E2E
Cloud & Infrastructure: AWS (EC2, S3, RDS, IVS, SES, Media Pipelines, Elastic Beanstalk), Google Cloud Platform (GCP), Docker, Kubernetes, Nginx, Apache, Linux (Ops)
CI/CD & Tooling: GitHub Actions, Bitbucket Pipelines, Turborepo, pnpm Workspaces, Vercel, Git
Monitoring: New Relic, Prometheus, Structured Logging
Practices: Agile Methodologies, Technical Leadership, Mentorship, Code Review, Open-Source Contributions

Experience

Wazobia Technologies | Software Engineer & Team Lead | UK *April 2023 – Present*

- Lead a team of 4 engineers across frontend and backend workstreams, driving technical direction, code review standards, and sprint planning
- Architect frontend systems using React, TypeScript, Vue, and Next.js, boosting rendering performance and eliminating duplicated code across multiple editorial and media-brand platforms
- Manage server state and complex data views with TanStack Query, TanStack Table, and TanStack Router, and client state with Zustand, simplifying data fetching and reducing prop-drilling across the codebase
- Build UI with Tailwind CSS, shadcn/ui, and Radix UI, handle forms and validation with React Hook Form and Zod, and add interaction design with Framer Motion, accelerating consistent feature delivery

- Ensure frontend quality through Storybook-driven component development and end-to-end testing with Playwright, Cypress, and React Testing Library, and use tRPC, Apollo Client/urql, Vite, and a Turborepo monorepo for type-safe, fast local development
- Design and build backend services spanning Node.js, Python (Django/DRF, Celery), Java (Spring Boot), .NET/C#/ASP.NET Core, and PHP/Laravel, exposing REST and GraphQL APIs backed by PostgreSQL and MySQL, using TypeORM for data modeling and migrations
- Architect and operate microservices and event-driven systems, including Kafka-based workflows, supporting scalable, decoupled backend architecture
- Develop AI/ML capabilities in Python – semantic vector search, RAG pipelines (LlamaIndex), content recommendations, and LLM-powered content generation and tagging using OpenAI APIs – driving a 30% increase in content engagement and click-through
- Build and maintain internal admin tooling using React Admin and Directus, and automation workflows using Make.com, n8n, and Zapier, extending GoHighLevel (GHL) with custom code
- Build calculation-driven financial tools, including P&L statement generation and break-even analysis, with spreadsheet-style input components, chart visualizations, and PDF/Excel export
- Implement OAuth/JWT authentication and Role-Based Access Control (RBAC), enforcing encryption in transit and at rest
- Build and maintain hybrid and native mobile features using Capacitor, Expo, React Native, and native Android (Java, Kotlin), managing app store publishing (signing keys, certificates, EAS-based OTA updates)
- Integrate Stripe, Twilio, and Google APIs into production services, and use Supabase, Sentry, and LogRocket for backend-as-a-service and monitoring needs
- Containerize and orchestrate services with Docker and Kubernetes, configure and manage Nginx/Apache web servers, and manage Linux-based production systems
- Automate CI/CD pipelines with Bitbucket Pipelines and GitHub Actions, cutting deployment time by 40% and reducing production incidents
- Implement observability with New Relic and Prometheus, enabling proactive detection and resolution of performance regressions
- Build automated unit, integration, and end-to-end test coverage, reducing production bugs by 60%

Client Projects:

Jungle Creations

- Optimized content management system using React and Node.js, improving article publishing efficiency by 30%
- Developed a custom CMS system similar to Contentful/DatoCMS, empowering content creators and reducing production time by 25%
- Successfully maintained and optimized the company websites using JavaScript frameworks, driving a 20% increase in organic traffic
- The websites include Vt.co, Twistedfood.co, CraftFactory, Fournine

Hivedeck

- Collaborated with the Hivedeck team to develop a React-based website builder platform, empowering over 500 users to create and manage websites efficiently
- Designed and implemented 3 custom templates, increasing template usage by 40% and enhancing client experience

TBC Dev | Software Engineer | Remote *January 2023 – March 2023*

- Developed Zooto, a cross-platform application using React and JavaScript that integrates with AWS services for data storage and video streaming
- Collaborated closely with the engineering team throughout the project lifecycle, contributing to the development, testing, and deployment of key features
- Implemented robust testing frameworks to ensure application stability and performance
- Actively participated in the continuous deployment process and the iterative enhancement of features, increasing user engagement by 30%

Afrilearn Future of Learning | Software Engineer | UK *May 2022 – January 2023*

- Transformed UI designs into fully functional websites using Next.js and Node.js, improving website performance by 50% and reducing load times by 40%
- Contributed to design and implementation of React-based frontend architecture that scaled to support over 100,000 active users
- Built backend services using Node.js and MySQL, and used Prometheus for production monitoring
- Developed cross-platform mobile applications using React Native, resulting in a 25% increase in mobile user retention
- Delivered formal presentations to management, proposing product improvements and future feature recommendations
- Collaborated with international teams to build and deliver high-quality software solutions that met business requirements

Fiverr and Upwork | Freelance Web & App Developer | Remote *January 2021 – May 2022*

- Developed various web applications using React, Redux, TypeScript, jQuery, and Node.js for international clients
- Built and customized WordPress websites using Elementor, WPBakery, and WooCommerce, and Shopify stores (Liquid, themes, checkout configuration) early in this period
- Developed native Android applications using Java and Kotlin, working with the Android SDK, for international clients
- Designed and built backend APIs using Node.js and Hono.js for a client project
- Independently managed projects from requirements gathering to deployment, ensuring high client satisfaction
- Implemented scalable and maintainable code bases, following best practices in software development

Haper-Hit | Software Engineer (Internship) | UK *Nov 2019 – January 2021*

- Developed a web application using JavaScript and React that scrapes and analyzes historical data to generate forecasts
- Identified and resolved bugs and vulnerabilities to ensure smooth deployment processes
- Created data visualizations using D3.js library after initial analysis in Excel

Side Projects

SubTrackr – Subscription Spend Analytics Platform | Project Lead & Full-Stack Engineer
React, TypeScript, NestJS, PostgreSQL, Drizzle ORM

- Led development of SubTrackr end-to-end, architecting the full data model and API layer and directing the feature roadmap for a platform that turns subscription billing data into personalized spending insights
- Designed a behavioral identity engine classifying users into spending personas from normalized monthly category spend, with month-over-month history tracking and explainable "why" breakdowns
- Built cohort-based benchmarking (city, country, and identity-segmented) enabling percentile spend comparisons across regions and user segments
- Diagnosed and resolved a production-blocking database migration conflict (ambiguous Drizzle table rename across 3 candidate tables), restoring a clean migration path with zero data loss
- Live: new-subtrackr.kiyoo.online

Namy – Restaurant Discovery & Rewards App | Founder & Full-Stack Engineer
Next.js, Capacitor (iOS/Android), NestJS, Apollo GraphQL, Prisma, PostgreSQL, Stripe, AWS (S3, SES)

- Built Namy, a dual-sided restaurant discovery and coupon app with gamified rewards, shipping a single Next.js codebase wrapped in Capacitor and deployed to web, iOS, and Android
- Designed and implemented a promotional push notification system end-to-end using Novu (workflow engine, deep-linking, inbox and push delivery), enabling targeted single- and multi-restaurant promo campaigns
- Integrated Stripe payments, Google APIs, and AWS S3/SES for media storage and transactional email into a NestJS/Prisma/PostgreSQL backend
- Implemented native mobile deep-linking (restaurant pages, filtered search, explore feed) across the Capacitor-wrapped app, bridging web routing with native push payloads across iOS, Android, and web
- Owned architecture end-to-end – GraphQL API design (Apollo/NestJS), Prisma schema and migrations, JWT

authentication (Passport), and CI quality gates (lint, typecheck, test)

- Live: namyapp.com

Education

Federal University of Technology Akure | Nigeria (November 2014 – January 2019)
Bachelor of Technology: Surveying and Geoinformatics
Coursework and practical training included GIS fundamentals, spatial data analysis, and mapping tools (ArcGIS, Leaflet, Mapbox GL JS, GeoJSON).

Certifications

Udemy | Master Certified Web Professional - Designer (CWP) (Jan 2021 – March 2021)
Pirple | NodeJs Master Class (2021)
